

Supplementary Information

Study procedure details

Table S1: Overview of the interview sequence

Timepoint	Phase
T0	Baseline assessment
T1	Pre-interview assessment
T2	Personality interview
T3	Mid-interview assessment 1
T4	Attachment interview (BRFI)
T5	Mid-interview assessment 2
T6	Solution-focused intervention
T7	Post-interview assessment

Note. T0 represents the online baseline assessment prior to the interview date. T1 through T7 occur sequentially during the online interview. The phase that comprises the subset of the data used in the present study is marked in **bold**.

Prompt template

Sentiment annotations

1. System Prompt

“You are an expert clinical psychologist coding transcripts. Your task is to classify the emotional sentiment of a single participant speech turn from a relationship interview, a structured attachment-relationship reflection where the participant describes the quality of their close personal relationships. Reply with exactly one word: positive, neutral, negative, or other. Use 'other' when the turn is not about the relationship itself (e.g. technical issues with the video call, scheduling, or small talk unrelated to attachment). Output nothing else.”

2. Few-Shot Examples (8 Total)

Positive:

- **User:** Speech turn: “She was always there for me when I came home from school. I felt really safe and loved in that relationship.”
Assistant: positive
- **User:** Speech turn: “I remember my partner holding my hand during a really hard time. It made me feel like I could count on them no matter what.”
Assistant: positive

Neutral:

- **User:** Speech turn: “We didn’t really talk much about feelings. The relationship was just, you know, normal I guess.”

Assistant: neutral

- **User:** Speech turn: “I would say we got along okay. There were good days and bad days, nothing that really stands out.”

Assistant: neutral

Negative:

- **User:** Speech turn: “He had a terrible temper. When he got angry I would hide in my room. I never felt safe in that relationship.”

Assistant: negative

- **User:** Speech turn: “There were a lot of arguments. I felt like I was always walking on eggshells around her, afraid of being rejected.”

Assistant: negative

Other:

- **User:** Speech turn: “Sorry, I think my connection dropped for a second. Can you hear me now?”

Assistant: other

- **User:** Speech turn: “Hold on, let me adjust my camera. The Teams window is a bit glitchy today.”

Assistant: other

3. Formulating the complete prompt

For each speech turn, the script constructs the chat template as:

- a system message (the `SYSTEM_PROMPT`),
- eight few-shot demonstration pairs (user: “Speech turn: ...”, assistant: the one-word label),
- and a final user message containing the target turn with the two previous speech turns as context.
